

LIGHTED SECURITY BOLLARDS

Cal Pipe Security Bollards newest addition - The Lighted Security Bollard. The unique design of the lighted security bollard makes it as strong as your security or safety requirement needs it to be. We build our lighted bollards in two pieces; a carbon steel bollard designed to withstand even high speed impacts forms the inner core, and the outer sleeve is manufactured from Type 304 stainless steel for long lasting durability. The polished look of the stainless steel finish makes the bollard as beautiful as it is strong. Choose from fixed/embedded or baseplate mounted. Choose from a 15w to 42w lamp.

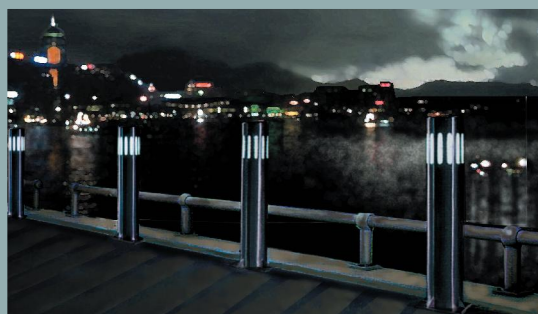

LIGHTED SECURITY BOLLARDS

The stainless steel outer sleeve is polished to a #4 finish, The outer sleeve is connected to the inside mounting post with tamper proof bolts. Once attached, the bollard will have the look and function of a lighted bollard and the vehicle stopping abilities of our strongest industrial bollard.
