

MANUALLY OPERATED RETRACTABLE BOLLARD

Sometimes retractable or telescoping bollards are required for a specific site. Our entry level model is manually operated and lifts easily and locks into place. When the bollard retracts, the stainless steel lid locks with a tamper resistant key for extra security. The LBMR Manual Lift bollard is manufactured from Type 304 stainless steel for long-lasting durability, low maintenance and ease of installation and operation. It is our most economical retractable bollard.

MANUAL LIFT BOLLARD

The new manual lifting bollard is perfect for all of your light security needs. From traffic control to limited access pathways, this bollard is the obvious choice for ease of use and economical, maintenance-free operation.
