

PNEUMATIC AUTOMATIC RETRACTABLE BOLLARD

Series LBPA pneumatically driven automatic bollards provide an environmentally friendly system that provides the very high level of security you would expect from an automatic system. Manufactured completely from stainless steel, the applications for the bollards are endless. Such systems are used to control entrances and exits or used for high level traffic control. Customers include sports facilities, corporate campuses, industrial installations, and high security government and military facilities.

AUTOMATIC RETRACTABLE BOLLARDS

Pneumatic bollards can be integrated with any access control option, whether a key system, guard operated, proximity card, or any other system or software. The system is geared for both high operation cycles or minimal use.
